Virtual Fibre Channel lab notes

Click Next to begin your Lab Exercise

(*Please note that for this lab exercise there are no Fibre channel ports, in the production environment you will need to have a Fibre channel host bus adapter*)

1. From server manager page select **Tools**, **Hyper-v Manager**
2. Right-click on the host machine **Server1** and select **Virtual SAN Manager**
3. Click **Create** to add a Virtual Storage Area Network
4. Click in the name box and type **classfc** for the name of the SAN, then press Enter to continue
5. Click on **Apply**, click on **OK**
6. Right-click on the **classvm** and select **settings**
7. Select **Fibre Channel Adapter**, then click **Add**
8. Click the down arrow under virtual SAN and select **classfc**
9. Click on Apply, Click on OK
