## Setting password expiration

In Microsoft 365, users' passwords never expire by default.

You can use the Microsoft 365 admin center to change this setting for your organization. To change the password expiration

policy, perform the following steps:

1. In the Microsoft 365 admin center, on the Settings menu, Org, click Security & privacy. Select Password expiration policy from the list

2. In the Password policy section, click Edit.

3. Turn off "Set user password to never expire" and specify the number of days between 14 and 730 for password expiration.

4. Specify the number of days between 1 and 30 for the notification warning of password expiration.

5. Save your settings.

## Password expiration policy

Choose the number of days before a user's password will expire, and the number of days before they're notified about an upcoming password expiration. The policy applies to everyone in your organization. х
